Description

Non-corrosive bio formulated cleaning products for transport infrastructure operations, including train and bus fleets. A unique product which replaces many hazardous chemicals in the workplace, with the ability to cut through the heaviest grease, oil and grime stains.

The Plus cleaning system is based on a concentrate cleaning solution specially formulated to rapidly remove surface contaminants such as break dust, diesel soot, dirt, grease, grime and other stains from train and bus exterior surfaces. Non-corrosive cleaning solutions for all surfaces.

Application

Where products usually require high pH levels (alkaline detergents) to emulsify oil and grease, Plus system will do the job in a very efficient time with less effort. This ability to remove dirt, grease and oil without a high pH level is not only safe for the user but also less damaging on assets and equipment.

Supply / Directions for use

- Use at 2-3% dilution. Dilution and dispensing systems available for bulk consumers.
- Hand cleaning: Dilute up to 20 parts water depending on type and depth of soil. Apply by cloth or spray and rinse after use. **NOTE - Allow enough time for product to penetrate before agitation.** May also be used with a soil extraction machine at a 3% solution.
- Plus surface cleaning systems covering a range of products to provide specific surface cleaning solutions. Our technical team assist in production of risk assessment and safe work method statements (SWMS).

Industrial Cleaning Products

A range of environmentally friendly cleaning and odour control solutions for industries including transport, retail and leisure, industrial and manufacturing.

- **Bio-Degreaser**
- **Acti-Plus**
- **Bio-Washroom**
