Description

Bio-Degreaser is a bio enhancement product system for eliminating the build-up of troublesome grease and fats in restaurants, hotels, canteens and other areas with problems caused by organic matter in drainage systems. It is a safe, economic and proven method compared to alternatives.

A Natural Biological Process

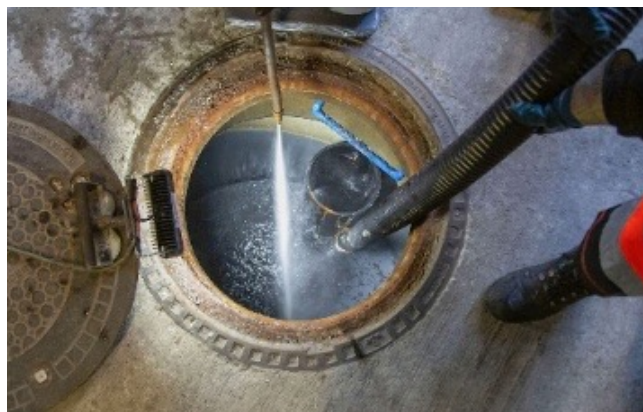

Bio-Degreaser biologically digests grease and other organic waste build up, turning it into carbon dioxide (CO_2) and water (H_2O). The micro-organisms in the product go to work as soon as they contact waste, anywhere in the plumbing system (grease traps, joints and drain lines) breaking down and digesting grease and solid waste wherever it accumulates. This action keeps drain lines and grease traps functioning properly if treatment is applied.

Supply / Directions for use

DO NOT DILUTE

For best results, use the complete Bio-Degreaser system with an automatic dosing pump with up to three present times per day.

- Initial dosage of 500mls into drain leading to fat trap.
- A minimum daily dosage of 200mls is required to maintain biological activity. It is advised to clean pipes and empty trap prior to treatment. We recommend the use of our Bio Starter Kit at the beginning of any treatment programme.
- STORAGE: Keep in a cool place, below 26°C. Avoid freezing. Leave in original container.

Industrial Cleaning Products

A range of environmentally friendly cleaning and odour control solutions for industries including transport, retail and leisure, industrial and manufacturing.

- **Bio-Degreaser**
- **Acti-Plus**
- **Bio-Washroom**
- **Oil Free**
- **Bio-Clean**
- **Auto Wash for Trains, Trucks, Buses, Vans & Cars**
- **Bio-Odour Control / OdourFree**
- **UV-C and AFT Disinfection / Decontamination Products**
