

Appendix A:

Consolidated List of Waste

The aim of this Appendix is to reproduce in full the List of Waste, including the legal instructions on its use, and give additional guidance on certain aspects of its use. The outcome of choosing the most appropriate entry in the list will help you decide whether you have a waste that is automatically hazardous, a waste that is automatically non-hazardous or a waste that you will have to do a full assessment on – a so-called 'mirror entry' waste.

A1.1 The structure of the List of Waste (LoW)

The LoW was established by Commission Decision 2000/532/EC¹. It consists of 20 chapters that must be used in a certain order of precedence. Some chapters relate to processes that generate waste and some refer to specific waste types.

The chapter headings are given a two-digit number as shown in table A1.1 below. An example of a chapter is:

20 MUNICIPAL WASTES (HOUSEHOLD WASTE AND SIMILAR COMMERCIAL, INDUSTRIAL AND INSTITUTIONAL WASTES) INCLUDING SEPARATELY COLLECTED FRACTIONS.

Each chapter of the LoW contains sub-chapters that are identified by four-digits, for example:

20 01 Separately collected fractions (except 15 01)

Within each sub-chapter is a list of waste types each given a unique six digit code, for example:

20 01 01 paper and cardboard AN²

For a waste to be given a particular LoW code, reference must be made to the 2, 4 and 6 digit entries. In the case of 20 01 01 the waste must:

- be paper or cardboard or a mixture of paper and cardboard
- be kept separately from other wastes when collected
- from a household (or is waste similar to that produced by a household), and
- not be packaging waste (which would be coded in sub-chapter 15 01 even if from a household)

If the waste does not meet all four of the above criteria 20 01 01 would not be the most appropriate code.

A1.2 Choosing a code from the LoW – the order of precedence of chapter use

There are 839 waste entries in the LoW and choosing a code for a waste can be complicated. It is important to understand that the LoW is not a look up list. You must;

- consider the entire list, rather than focussing on a single process chapter, and
- use the chapters in the order of preference specified in Commission Decision 2000/532/EC (set out in steps 1 to 5 below)

to enable you to identify the appropriate code for your waste.

Step 1 Identification by waste source

Chapters 01 to 12 and 17 to 20 refer specifically to industry process waste and municipal waste. If your waste falls into one of these chapters, and is listed there with one or more applicable entries, you should use the most appropriate code for your waste.

If, for example, you have a chemical surface treatment process that produces waste aqueous rinse waters, you could code them as either:

11 01 11* aqueous rinsing liquids containing dangerous substances MH

11 01 12 aqueous rinsing liquids other than those mentioned in 11 01 11 MN

The decision as to which of these entries you would choose is discussed below in Step 5.

You must not use a six digit 99 entry at Step 1 because more appropriate entries might be found in other chapters.

Step 2 Identification by waste type

If no appropriate entry is found in chapters 01 to 12 or 17 to 20, then you should check chapters 13, 14 and 15 to see if the waste is listed there. These chapters contain oil wastes; solvent wastes; and waste packaging, absorbents, filter materials, wiping cloths and protective clothing.

Step 3 Other general wastes

If waste is not found in chapters 01 to 15 or 17 to 20, then chapter 16 might contain the most appropriate code.

Chapter 16 contains a lot of general wastes such as vehicles, electronic equipment and batteries, as well as a number of chemical wastes like catalysts, laboratory chemicals and oxidisers.

Step 4 Non-specific wastes

Sometimes wastes cannot be found specifically in the LoW. If a waste is from one of the industry processes 01 to 12 and 17 to 20, you can now use the 99 code that you were not able to use in Step 1. An example of a waste that is coded 99 is a separate fraction of municipal hygiene wastes (20 01 99).

However you should use the most appropriate code, so should not use a 99 code if a suitable alternative is available in another chapter of the catalogue. For example amalgam waste from veterinary healthcare care should be coded 18 01 10*, even though that code relates to human healthcare, as it is clearly suitable.

Step 5 Hazardous waste classification

Some of the six-digit codes in the LoW have an asterisk (*) next to them; these are hazardous wastes. Wastes without an asterisk are non-hazardous waste.

In the LoW there are three types of entry:

- entries coloured in red and labelled AH; they are known as "absolute hazardous" wastes
- entries coloured in black and labelled AN; they are known as "absolute non-hazardous wastes"
- entries known as "mirror entries"

Absolute hazardous (AH) entries

These wastes are marked in the List with an asterisk (*) but the waste description next to the six-digit code does not have a "specific" or "general" reference to "dangerous substances" in their waste description. They are automatically considered hazardous. You do not need to work out what chemicals are in the waste to find out if it is hazardous or not. You must still find what (if any) hazardous properties the waste has for consignment and transport purposes.

We call these "absolute entries", and they are colour-coded red in WM2 Appendix A. For example:

13 07 01* fuel oil and diesel

AH

Key Point : Absolute Hazardous Wastes with No Hazardous Properties

A waste that falls under an absolute hazardous entry (e.g. any non-edible oil) is always hazardous.

If that waste has no hazardous properties the absolute hazardous entry still applies. The law does not allow another entry to be applied to that waste.

"Absolute" non-hazardous (AN) entries

If an entry in the list is not listed with an asterisk, and it does not have any link to a mirror or absolute hazardous entry, the entry is automatically not hazardous. An example is:

03 01 01 waste bark and cork

AN

Mirror entries

Mirror entries are typically divided into two:

- entries coloured in blue and labelled MH; they are known as "mirror" hazardous wastes
- entries coloured in green and labelled MN; they are known as "mirror" non-hazardous wastes

Mirror hazardous (MH) and mirror non-hazardous (MN) entries

Some wastes are not automatically hazardous or non-hazardous; they are called mirror entry wastes.

These wastes have:

- a hazardous waste entry (or entries) marked with an asterisk (*), and
- an alternative paired non-hazardous waste entry (or entries) not marked with an asterisk

A hazardous mirror has a "specific" or "general" reference to "dangerous substances" in its waste description. For example:

07 01 11* sludges from on-site effluent treatment containing dangerous substances MH

The non-hazardous mirror usually (but not always) has a defined link to its mirror using the words "other than those mentioned in ...". For example:

07 01 12 sludges from on-site effluent treatment other than those mentioned in 07 01 11 MN

This is an example of a mirror pair where the hazardous entry has a "general" reference to a dangerous substance(s). The hazardous entry is chosen if this waste contains any dangerous substance(s) at or above levels that make it hazardous.

Another example of mirror entries is:

17 03 01* bituminous mixtures containing coal tar MH

17 03 02 bituminous mixtures other than those mentioned in 17 03 01 MN

This is an example of a mirror pair where the hazardous entry has a "specific" reference to a dangerous substance, in this case coal tar. The hazardous entry is chosen only if the waste contains the particular dangerous substance (in this case coal tar) at or above levels that make it hazardous.

Guidance on whether the hazardous or non-hazardous mirror entry is applicable is given in Chapter 2 and Appendix C.

Key Point : Atypical Mirror hazardous (MH) entries

Not all **Mirror hazardous (MH)** entries link to a single **mirror non-hazardous (MN)** entry.

Some may link to **Absolute hazardous (AH)** entries, other **Mirror hazardous (MH)**, or multiple **mirror non-hazardous (MN)**.

These entries may occur as groups of several entries, and a **mirror non-hazardous (MN)** entry may not always be provided.

We have provided some examples in this chapter to explain how such unconventional entries are applied.

A1.4 The List of Waste

The LoW is reproduced below.

Key:

The type of entry is identified as one of:

- **AH : Absolute hazardous** entry - automatically hazardous waste, threshold assessment not required
- **MH : Mirror hazardous** entry - threshold assessment required – usually linked to other entries, typically but not exclusively, non-hazardous entries
- **MN : Mirror non-hazardous** entry- non-hazardous entry usually linked to a mirror hazardous entry - threshold assessment required
- **AN : Absolute non-hazardous** entry - automatically non-hazardous waste, threshold assessment not required

A number in the "example provided" column identifies that an example specific to that entry is provided in this chapter. General examples apply to all entries and are not identified by entry.

Notes to the LoW from Council Decision 2000/532/EC

| | |
|--------|--|
| Note A | For the purposes of this list of wastes, PCBs will be defined as in Directive 96/59/EC |
| Note B | Hazardous components from electrical and electronic equipment may include accumulators and batteries mentioned in 16 06 and marked as hazardous; mercury switches, glass from cathode ray tubes and other activated glass, and other similar items. |
| Note C | For the purpose of this entry, transition metals are: scandium, vanadium, manganese, cobalt, copper, yttrium, niobium, hafnium, tungsten, titanium, chromium, iron, nickel, zinc, zirconium, molybdenum and tantalum. These metals or their compounds are dangerous if they are classified as dangerous substances. The classification of dangerous substances shall determine which among those transition metals and which transition metal compounds are hazardous. |
| Note D | Stabilisation processes change the dangerousness of the constituents in the waste and thus transform hazardous waste into non-hazardous waste. Solidification processes only change the physical state of the waste (e.g. liquid into solid) by using additives without changing the chemical properties of the waste. |
| Note E | A waste is considered as partly stabilised if, after the stabilisation process, dangerous constituents which have not been changed completely into non-dangerous constituents could be released into the environment in the short, middle or long term. |
