enva.com

Enva is Ireland's leading Environmental Management, Resource Recovery and Utility Services Partner and a trusted partner to the Pharmaceutical Industry. Our capabilities are underpinned by a network of 33 waste management and resource recovery facilities across Ireland and the United Kingdom.

We recover a broad range of hazardous and non hazardous waste materials for re-use in manufacturing and energy conversion, and also provide a complete portfolio of industrial, water and wastewater services.

Resource Recovery

A leading provider of sustainability solutions

Our core proposition is the management and recovery of valuable resources. We are proud that the work we do every day contributes to a better world. We continually innovate to process complex waste streams and recover resources to displace their virgin counterparts. Driving Circular Economy outcomes reduces the need for virgin resources and the associated energy and CO₂ impact of extracting, transporting and refining these materials.

We also offer waste stream monitoring and separation assistance (including benchmarking and KPIs) for our customers. This helps us to evaluate the way in which their waste could be better distributed and separated, putting in place various measures and solutions to help limit their environmental impact, as well as our own.

Water Services

Delivering the full spectrum of potable, process and wastewater services

Enva has a proven track record of servicing pharmaceutical customers across Ireland and the UK. Our team specialise in diagnosing and resolving operating issues across the whole water treatment network including storm and wastewater recovery and re-use.

We aim to maximise efficiency of resources while minimising energy consumption. Our product portfolio comprises a range of applicable solutions suitable for treatment of water and wastewater to cater for complex problems e.g. triton X treatment through advanced oxidation, pilot studies and extended aeration treatment plant modelling on new and existing waste streams. We also offer a broad range of filtration, disinfection and odour control solutions.

Enva provide environmentally sustainable products with an emphasis on reducing chemicals, replacing them with a biological or technological solution to meet the client's needs. Comprehensive testing is provided at our accredited laboratories, including respirometry testing and extended aeration waste water treatment plant modelling, all to help maximise the treatment plant efficiency.

Industrial Services & Environment Monitoring

Solving complex industrial cleaning and decontamination problems

Combining the latest equipment with expert project management, our services are designed to minimise downtime and business disruption, whilst protecting your organisation and the plant from health, safety and environmental issues. These include tank, vessel and bund cleaning and testing. We also provide drainage network management surveying, testing and repairs.

Enva offers commissioning and routine maintenance to your heating, chilling and clean utilities including, system flushing, degreasing, derouging and passivation services.

Emergency Response

24/7, 365-day emergency response for spill incidents and accidents including chemicals and oils, as well as drainage or wastewater issues.
